

Exhorting to Action

2021-04-04, Dr. Dennis Wilson, PhD, MBA

The FDA is lying to you, and stupid doctors are falling in line.

Read the following article with regards to the FDA position on Ivermectin:

<https://www.fda.gov/consumers/consumer-updates/why-you-should-not-use-ivermectin-treat-or-prevent-covid-19>

Note, in particular, the line in the 7th paragraph headed up "When Can Taking Ivermectin Be Unsafe?" the line reads, "The FDA has not reviewed data to support use of ivermectin in COVID-19 patients to treat or prevent COVID-19;..." Based on no review of evidence the FDA is holding to a cookie cutter policy.

People are dying and we, the people deserve better. The people dying may soon be your children and grandchildren, and the FDA is issuing cookie cutter policy which may amount to professional misconduct.

The FDA appears to be failing. The medical community seems to be suffering from paralysis of analysis. It is well past the time for action. We (the people concerned with our health and the health of the population at large (our children and grandchildren) need to initiate a storm of emails, letters, phone calls, podcasts and conversations directed at the medical community and politicians exhorting them to action.
